

Copy data to SQL DB

Now we will copy data of Cases and Deaths and Hospital admissions Daily processed files into Azure SQL DB tables.

Steps:

- First create a schema in Azure SQL DB and create the required tables with the script attached.
- Once created, create a linked service to SQL DB. Please refer to attached screenshot for reference:

Edit linked service

 Azure SQL Database [Learn more](#)

Name *
AzureSqlDatabase2

Description

Connect via integration runtime * ⓘ
AutoResolveIntegrationRuntime

Connection string Azure Key Vault

Account selection method ⓘ
☐ From Azure subscription ☒ Enter manually

Fully qualified domain name *
loveleenverma.database.windows.net

Database name *
LoveleenPOC

Authentication type *
SQL authentication

User name *
LoveleenPOC

Password Azure Key Vault

Password *

Always encrypted ⓘ ☐

Additional connection properties

 Connection successful
 Test connection

- After this create a pipeline and create two copy data activities to copy data from the Data Lake Cases and Deaths and Hospital Admissions processed files which are stored there after data flow execution.
- As we want to have latest data always in our table so we can also have one pre-copy script:
 TRUNCATE TABLE tablename;
 in our case, TRUNCATE TABLE covid_reporting.cases_and_deaths
 TRUNCATE TABLE covid_reporting.hospital_admissions_daily
- Create a dataset to Azure SQL DB linked service and select the required

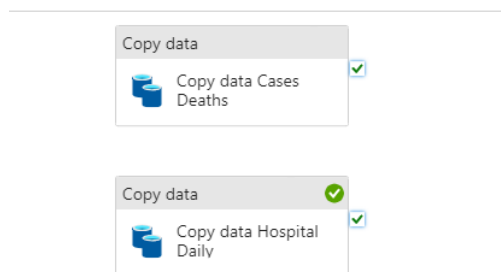

table there.

- After this create copy data activities using the dataflow processed datasets for these files and this azure sql db dataset
- In sink, define the pre-copy script to truncate the table before copy.

Copy data

Copy data Cases Deaths

🗑️ </> 📄 ➔

General Source **Sink** Mapping Settings User properties

Sink dataset * AzureSqlTable2 Open New Learn more

Write behavior ☒ Insert ☐ Upsert ☐ Stored procedure

Bulk insert table lock ① ☐ Yes ☒ No

Table option ☒ None ☐ Auto create table ①

Pre-copy script ①

TRUNCATE TABLE
covid_reporting.cases_and_deaths

data [Learn m](#)

Copy data

Copy data Hospital Daily

🗑️ </> 📄 ➔

General Source **Sink** Mapping Settings User properties

Sink dataset * AzureSqlTable2 Open New Learn more

Write behavior ☒ Insert ☐ Upsert ☐ Stored procedure

Bulk insert table lock ① ☐ Yes ☒ No

Table option ☒ None ☐ Auto create table ①

Pre-copy script ①

TRUNCATE TABLE
covid_reporting.hospital_admissions_daily

Write batch timeout ①

e.g. 00:30:00

General **Source** Sink Mapping Settings User properties

Source dataset * [Open](#) [New](#) [Preview data](#) [Learn m](#)

File path type ☒ File path in dataset ☐ Wildcard file path ☐ List of files ⓘ

Filter by last modified ⓘ Start time (UTC) End time (UTC)

Recursively ⓘ ☒

Enable partition discovery ⓘ ☐

General **Source** Sink Mapping Settings User properties

File path type ☒ File path in dataset ☐ Wildcard file path ☐ List of files ⓘ

Filter by last modified ⓘ Start time (UTC) End time (UTC)

Recursively ⓘ ☒

- After this you can query the data in these tables in DB. For example:

```
45  
46 SELECT * from covid_reporting.cases_and_deaths;
```

Results Messages

country	country_code_2_digit	country_code_3_digit	population	cases_count	deaths_count	report
Malta	MT	MLT	493559	78	0	2020-C
Spain	ES	ESP	46937060	11289	130	2020-C
